Summary and Evaluation of the Results

Comparison with Limit Values of CDPH

Parameter	Test After 14 Days			
	SER in Test Chamber µg/(m²h)	Concentration in Classroom [µg/m³]	Concentration in Office Room [µg/m³]	½ CREL [µg/m³]
TVOC	< 50	< 25	< 80	-
Single compounds (With Defined CREL Values) Toluene	< 1	< 1	< 2	150
Formaldehyde	< 2	< 1	< 4	< 9

Conversion of Emission Rates to CDPH Reference Room Concentrations

The CDPH method requires calculation of the measured emission rates into concentrations in given reference rooms. The equation and parameters figured below have been applied to calculate the concentrations in an office room or a classroom as required in the CDPH. The area used in the calculation varies depending on the expected usage of the product and therefore several entries can be found. Small and Very Small areas are not provided within the CDPH but are adapted from definitions given in EN 16516 and ISO 16000-9.

$$C_{\text{Calculated}} = \frac{SER_A \cdot A}{n \cdot V}$$

		Classroom Parameters	Office Room Parameters
n	Air Change, h ⁻¹	0.82	0.68
V	Volume of Reference Room, m³	231	30.6
A	Walls Area, m²	94.3	33.4
