Basis of calculation
This EPD is developed in accordance with the European standard EN 15804+A2.

Comparability
EPDs of construction products may not be comparable if they do not comply with the requirements in EN 15804. EPD data may not be comparable if the datasets used are not developed in accordance with EN 15804 and if the background systems are not based on the same database.

Validity
This EPD has been verified in accordance with ISO 14025 and is valid for 5 years from the date of issue.

Use
The intended use of an EPD is to communicate scientifically based environmental information for construction products, for the purpose of assessing the environmental performance of buildings.

Product information

Product description

Steel profiles are manufactured from hot dip galvanized steel with different surface treatment in order to obtain intact surface on the products. To meet requirements regarding noise reduction properties, the profiles can be mounted with sealing strips and/or isolation sheets.

The products are transported to the customers on wooden spacers with plastic straps. The straps are not included in the EPD.

The main product compounds incl. wood packaging.

Representativity

This declaration, including data collection and the modeled foreground system including results, represents the production of ***light gauge steel profiles*** on the production site located in Langeskov, Fyn. Product specific data are based on average values collected in the period 1/7 2019 - 30/6 2020 and provided by Ib Andresen Industry. Background data are based on Simapro version 9.2.0.2 2020 and Ecoinvent 3.6 2019 – allocation, cut-off by classification – unit.

Hazardous substances

The profiles does not contain substances listed in the ”Candidate List of Substances of Very High Concern for authorization”.

(http://echa.europa.eu/candidate-list-table)

Essential characteristics (CE)

The Ib Andresen Industri-profiles are covered by harmonised technical specification EN 10346:2015. Declaration of performance according to EU regulation 305/2011 is available for all declared product variations.

Further technical information can be obtained by contacting the manufacturer or on the manufacturer’s website:

https://iai.dk/dokumenter

Reference Service Life (RSL)

The product has an estimated service life of 60 years.

Picture of product(s)

The profiles are available with different types of surface treatment. Products used in internal and external walls and ceilings have a surface layer of 100 – 275 g per square meter.

Steel grades are expressed according to the standard EN 10027, where e.g. S 250 GD + Z100 designates a structural steel (S) with a specified yield of strength of 250 MPa (250) and a surface layer of 100 g plain Zinc per square meter (Z100).

The thickness of the zinc coating determines the duration of protection. When galvanized steel is exposed to atmospheric conditions, there is generally a linear relationship between the thickness of the zinc coating and the lifetime expectancy. The corrosion categories are an expression of this. According to ISO 9224 and when it is defined in which environment the profiles are used, which are inside gypsum constructions, the service life is estimated to be 60 years.

LCA background

Declared unit

The LCI and LCIA results in this EPD relates to 1 kg of light gauge steel profile.

PCR

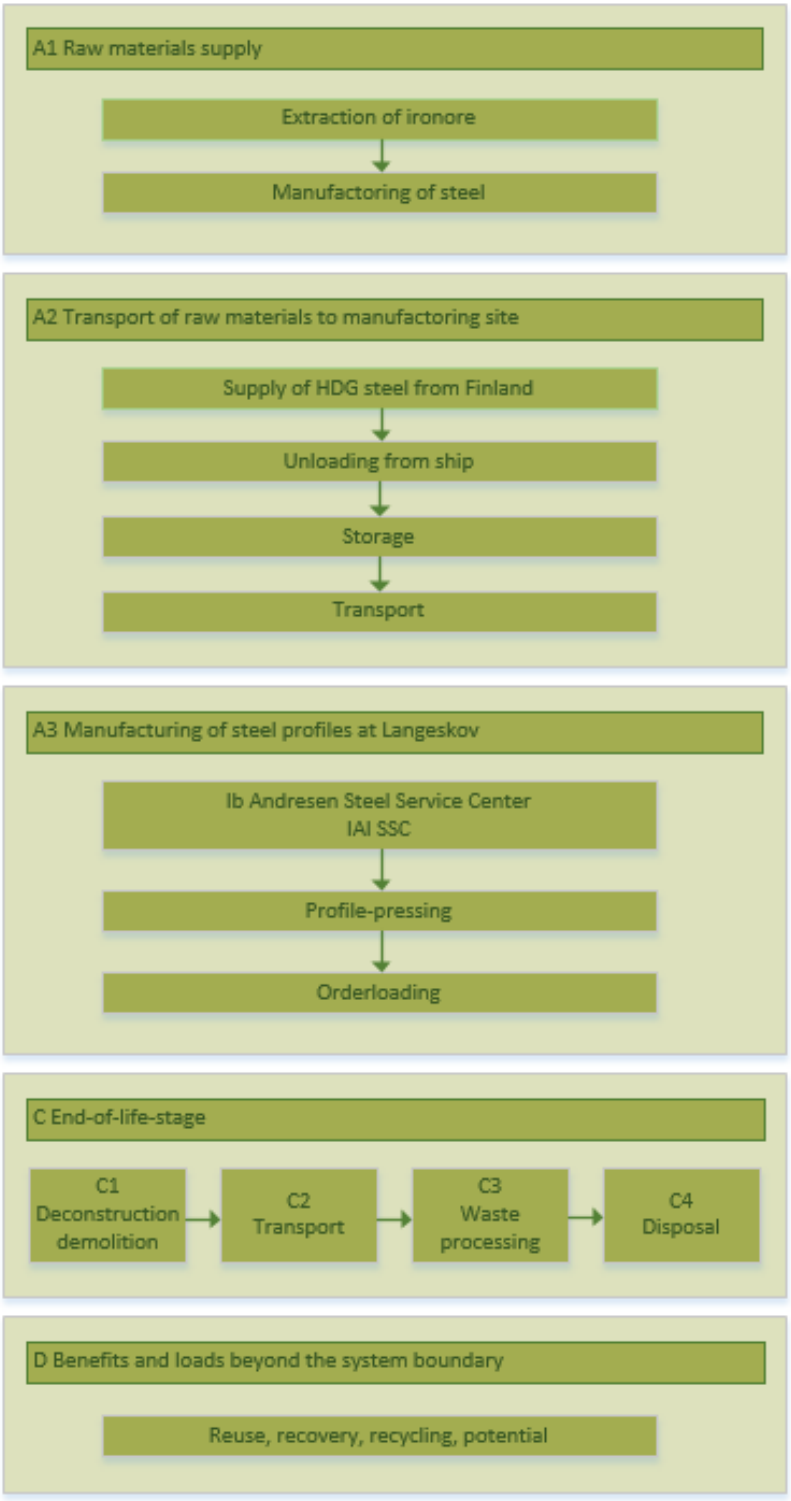
Product category rules: PRC 2019:14 Construction products, Version 1.0, date 2019-12-20.

This EPD is developed according to the core rules for the product category of construction products in EN 15804:2012+A2

.

System diagram

Cradle to gate with module C1 - C4, module D and with optional modules.



The profiles are manufactured from hot dip galvanized carbon steel delivered from steelworks as coils by boat to the IAI's port in Nyborg. In IAI site Langeskov, the coil is divided in narrow bands whose width fit the specific profiles, and the profiles are manufactured through roll forming technique.

System boundary

The general rules for the exclusion of inputs and outputs follow the requirements in EN 15804, 6.3.5, where the total of neglected input flows per module shall be a maximum of 5 % of energy usage and mass and 1 % of energy usage and mass for unit processes.

The system boundaries of this EPD includes Module A1, A2, A3, C1, C2, C3, C4 and Module D.

Product stage (A1-A3) includes:
A1: Extraction and processing of raw materials. The mining of raw materials as iron and zinc. The process of making the hot rolled steel-coils in the right alloy accordingly the IAI-requirement, including zinc-coating.

A2: Transport of raw material from the steel mill in Finland to the IAI stock and to manufacturing site. Transport of the profiles to stock in Hobro.

A3: The manufacturing processes. Slitting of hot rolled coils and roll forming steel into various widths, thicknesses and surface treatments according to the requirements of the ordered profiles.

Packaging to customers on pallets with straps.

External services such as electricity, heating and water, waste and emissions to air, land and water from manufacturing.

End of life stage (C1-C4) includes:
C1: Deconstruction of the construction into which the steel is built.

C2: Transportation of waste from construction-sites to waste processing sites / disposals.

C3: Waste processing, sorting of scrap steel.

C4: Disposal.

Steel is a highly recyclable building material, once steel has been made, it can be recycled without weakening its properties.
The background data used is Miljøstyrelsens Affaldsstatistik 2018: Proportion of construction waste prepared for the purpose of reuse, recycled or used for other final material recovery is calculated at 89%.
The impacts from the End-of-life stages were modelled in Simapro.

Resource recovery stage (D): Potential for reuse, recycling or energy recovery.

Indoor air

The EPD does not give information on release of dangerous substances to indoor air because the horizontal standards on measurement of release of regulated dangerous substances from construction products using harmonized test methods according to the provisions of the respective technical committees for European product standards are not available.

Soil and water

The EPD does not give information on release of dangerous substances to soil and water because the horizontal standards on measurement of release of regulated dangerous substances from construction products using harmonized test methods according to the provisions of the respective technical committees for European product standards are not available.
