

# Knauf Corner Bead micro

## Product Description

Knauf Corner Bead micro is an aluzinc steel external corner reinforcement with 32mm expanded wings. Thanks to the fine expanded metal wings, it provides superior keying to joint compounds and eliminates shadowing.

## Fields of Application

For quicker and easier reinforcement of corners and edges on gypsum boards with only 1 mm thickness of ready-mix joint compound.

## Plaster thickness & Placing

Only 1 mm of ready-mix joint compound.

Nail, staple or "clinch" the "Knauf corner bead micro" on the gypsum board ("dry" fixing) and directly apply the first coat of "Knauf Joint Filler" and the second and final coat with "Knauf Readyfix" joint compound. (only two coats). Expanded metal wings allow a quicker penetration of the joint compound with a much shorter drying time.

## Material & Packing

Corner bead made out of aluzinc coils (AZ 150) according to EN 10215 standard.

60 lengths per box.

## Technical Data

**Dimensions:** Standard-manufacturing dimension of 3M05 (10'). (Other dimensions on request)
